FOREWORD

I am pleased to present Petauke Town Council's Strategic plan for 2019-2024. This plan is the first of its kind in that it follows the recommended guidelines issued by the Ministry of Local Government with the support of German Development Cooperation. It is also a first in the sense that the strategic issues were identified using survey findings which in turn were subjected to further analytical scrutiny in a 5-day strategic planning workshop, therefore, making it an evidence based document.

The plan itself serves a number of useful roles in the Council's operations. First, it is a reflection of the aspirations of Petauke residents in general and in particular a commitment of your Council to meet these ideals. Secondly, it is a rallying point for external stakeholders to identify what we are passionate about and join hands with us in delivering *"a clean, healthy, green town that is connected and inclusive of all in local economic growth."*

Thirdly, the plan serves as a road map to that clean, healthy and green town. Our strategic focus and resources will be channeled to that end. It is our belief that the initiatives outlined in this plan once rolled out will foster an enabling environment to spur economic development and job creation in our district.

Indeed, having aligned our interventions to the 7NDP we are of the view that this plan is poised to contribute to the provincial and national goals. Of particular interest for us is the implementation of the industrialization policy through value addition. Petauke district is well endowed with agricultural produce that can provide raw materials for industry. In addition, the centrality of Petauke in Eastern province can save the needs of the country with little logistical nightmare.

I remain confident that through the interventions contained in this Strategic Plan, our Council will meet the aspirations of the people of Petauke.

James O. Lungu
Council Chairperson

PREFACE

Petauke Town Council Strategic Plan 2019-2024 (Stratplan 2019-2024) is our commitment to the communities of Petauke to improve service delivery and consequently the quality of life in the district. It sets a clear and visible strategic direction for the organisation and captures the views of our stakeholders.

This Strategic Plan is a product of intensive community consultation through baseline studies using Knowledge Attitude and Perception survey (KAP survey) tools. In order to capture representative views of our population we chose both rural (Mwanjabanthu chiefdom) and urban (Central Business district) as study sites for our survey. The outputs of both these processes including the internal stakeholders (Council staff) reflect the aspirations of Petauke residents which converge to make up our strategic plan.

The planning process was systematic, consultative and participatory and the planning workshop was very analytical in keeping with evidence based approaches to planning. This is one document which truly reflects where, we, the people of Petauke desire to go. Such a plan acts as a living, dynamic partnership between Council and the community.

While we herald this plan we are not oblivious to the external economic environment which looks bearish in the near future. We, therefore, intend to harness and leverage our competitive advantage in farming and come up with special purpose vehicles to widen our revenue base.

The challenge for us all now lies in continuing to work together to ensure that these goals of the plan are met.

A handwritten signature in black ink, appearing to be 'Greenford Sikazwe'.

Greenford Sikazwe
Council Secretary

Acknowledgement

We would like to thank the Council Chairperson for finding time to grace us with his presence and his contributions were invaluable greatly enriching the planning process. We also want to thank the Council Secretary for his unwavering support from start to the final production of the Strategic plan.

We equally would like to thank both our external and internal stakeholders for taking time to participate in the surveys. Your honesty and hope will not be betrayed in the implementation of this plan.

We acknowledge the role our consultant Messrs Rubicon Management Consultants played and would like to thank them for guidance, facilitation of the planning workshop and drafting of the Strategic plan.

We are equally alive to the contributions made by workshop participants for the entire 5 day planning workshop. We salute your steadfastness and eagerness to implement this plan in a multi-sectoral approach.

Last but certainly not the least, we would like to thank the Planning department for their unflinching support to the processes we are indebted to them and those who played a background role in the formulation and development of this plan we say thank you all.

1.0 Introduction

Petauke Town Council (PTC) is a local authority body established under Articles 151 and 152 of the Republican Constitution and the Local Government Act, Chapter 281 of the Laws of Zambia. It is charged with the responsibility of service delivery and infrastructure development in the district.

In pursuance of its mandate, PTC has developed a strategic Plan 2019-2024 (Stratplan 2019-2024) that takes cognizance of a number of policy documents for instance the Urban and Regional Planning Act 2015, the Revised National Decentralization Policy 2013 and its effective devolution date 1st January 2015, The Constitution Amendment Act 2015 and the 7 National Development Plan (7NDP).

Additionally, the Stratplan recognizes the bearish economic outlook and the constraints it will impose on the supply of services while the demand for quality services will continue to rise. Against this backdrop, PTC has formulated and developed a five year Stratplan 2019-2024 that will guide annual goal setting, budgeting and programmatic evaluation.

Our Stratplan identifies the Vision, Mission, Values and Strategic themes as the higher goals. It further cascades these higher goals into organizational wide goals which in turn are broken into departmental and individual performance goals.

One of the new conceptualization of service delivery that is incorporated in this Stratplan is the concept of 'delivering as one' or integrated multi-sectoral planning. Another unique notion is that of leaving no-one behind through inclusive service delivery.

A key enabler for the above changes in the implementation process will be the adoption of a new organizational culture that is characterized by creativity and innovation in order to meet high standards of service delivery while being alive to the fiscal challenges of Council.

1.1 Physiographic Characteristics

Petauke is one of fourteen districts in Eastern Province of Zambia. It is situated 406km east of Lusaka and 170km west of Chipata. It is located in the southern part of Eastern Province, and lies between -14.2426 latitude and 31.3253 longitude, GPS coordinates 14°14' South and 31°19' East. Due to a recent delimitation exercise where four geographically dispersed wards (Mawanda, Lusangazi, Ukwimi and Chisangu) were hived off from Petauke in the north to form a new district called Lusangazi, Petauke boundaries have been affected by this exercise. Nonetheless, the District still shares an international boundary with Mozambique in the south and district boundaries with Lusangazi in the north, Sinda in the east, Nyimba in the west, and Serenje in Central Province in the north-west. "See Map 1.1 below that depicts the 16 wards of Petauke after the afore-mentioned four wards were removed to create Lusangazi district."

Map 1:1 Map of Petauke including ward demarcations

Petauke District

PTC is resolved to make proposals regarding wards to be further delimited in future due to their vastness and increased population. The wards include; Mateyo Mzeka, Nyika, Ongolwe, Kaumbwe, Chilimanyama, Singozi and Msumbazi. The delimitation should also be extended to Petauke Central Constituency.

The District enjoys a tropical climate with an average temperature of 25.9°C with a minimum of 12°C. In terms of topography, the District is divided into two distinct areas namely the valley and the plateau. The southern and central parts of the district are mostly plateau with an altitude ranging from 750m to over 1000m above sea level and cover three quarters of the District. A quarter of the northern part of the District is the valley. In terms of vegetation the District is predominantly savannah with most of the forest being found in the northern parts of the plateau and the valley areas. The people especially on the plateau have created extensive deforestation by clearing vegetation for settlement, lumbering, agricultural activities and wood fuel. For hydrology, the Luangwa is the largest river in the district and runs from the north to the southwest feeding into the Zambezi River. It has five tributaries i.e. Mvuvye, Msanzala, Kanzangazi, Lusinde and Nyimba.

1.2 Socio-Economic Characteristics

This section identifies trends in the demography and socio-economy of our district in order to inform interventions that meet the needs and aspirations of communities in Petauke.

1.2.1 Population Characteristics

Population census in Zambia is conducted after every ten year interval. The baseline number for Petauke's total population stood at 241,056 in 2010 with 50.7% women and 49.3% men¹. With a projected growth rate of 2.6% the current population for Petauke stands at about 381,395 of which 49.94% are men while 50.05% are women. Similarly, the population of the district is further expected to grow during the five year life of the Stratplan to 446,479. A growing population invariably will put pressure on the land use. Comparing with the base year of 2010 the population density of Petauke was 33.7

¹ CSO: 2010-Census of population summary report

people per square kilometer this has increased to about 40 people per square kilometer. Given that most population trends tend to bulge near urban areas the density number could be higher owing to vast tracts of land were hived off to the new district Lusangazi.

The delimitation will certainly have implications for future growth of Petauke particularly with physical land use. Growth of industry will necessitate among other things like need for human settlement, solid and liquid waste disposal site and other social amenities. Fortunately for Petauke, like the rest of the towns in Eastern province, it is mainly a rural town with vast number of people still dwelling in rural areas. See Table 1 below showing urbanization of Eastern province which mirrors the urbanization of Petauke district². Currently, only 12.6% of the total population is urbanized leaving the other 87.4% in the rural surroundings.

Source: Zambia Population and Demographic Projections, 2011-2035

While informal human settlements are always a challenge, it is therefore imperative that an Integrated Development Plan (IDP) is conducted to forestall any unplanned human settlements arising out of an increase in economic activity and population growth.

When the total population figure is disaggregated it becomes apparent, like the rest of Zambia, Petauke has a youthful population of about 71% who are under 35 years. See Table 1:2 below.

² CSO unfortunately does not disaggregate variables other than population statistics

Source : CSO- 2010 Census population Summary report

Of those below 35 years the 0-4 age group is the largest followed by the 5-9 age group and then the 10-14 age group. The implication of these age groups is quite obvious, in terms of social needs; they will require health facilities, recreational spaces, schools (nursery, primary and secondary) and clean environments in which to play.

Although, the above 35 age group is less than 29% of the population we still need to plan for them according to the theme of the 7NDP of 'leaving no one behind'. What is important to 35 years and above are a clean environment, equal economic opportunities to resources, access to service delivery and a sense of well-being.

Another point worth pointing out is the composition of the population over time which mirrors a near perfect 50/50 percent of males and females. Our planning in this document emphasizes inclusiveness by taking into account gender issues and persons with disabilities.

1.2.2 Employment Status

In the latest 2017 Labour Force Survey (LFS) Zambia implemented the resolution of the 19th International Conference of Labour of Statisticians (ICLS). Key among the resolutions has to do with definitions on employment, unemployment, potential labour force, labour force and what work is and is not. Due to the new definitions and their application some labour market indicators have two numbers for international use (comparability purposes across countries) and for local use.

For instance, the international/standard defines those persons in unemployment as those available (having just recently left work) and are seeking for work. Whereas the local perspective includes those who are of working age but are unavailable and those seeking for work. Applying the international definition the unemployment rate in Zambia is about 12% but when we use the local definition the unemployment rate rises to 41%. See below Table 1:3

Table 1:3 International and Local Perspectives

	Labour Force	Persons In Employment	Persons In Unemployment	Potential Labour Force
International Perspective				
Total	3,398,294	2,971,169	427,125	
Male	2,041,306	1,797,957	243,349	
Female	1,356,988	1,173,212	183,776	
Local Perspective				
			Persons In Unemployment	
Total	5,049,059	2,971,169	427,125	1,650,764
Male	2,759,098	1,797,957	243,349	717,792
Female	2,289,961	1,173,212	183,776	932,972
Source: CSO, 2017 Labour Force Survey				

From a local perspective and in particular Petauke district's perspective it is safe to extrapolate that unemployment rate must be more than the local perspective of 41%

owing to the fact that we do not have industries in Petauke unlike other districts in Zambia. Although, farming is labour intensive, bulk of the farming in Petauke is subsistence which is not regarded as paid up work and therefore it does not contribute to employment figures. According to the LFS 2017 and using the 'strict international rate' the urban unemployment rate stands at 11.9% while the rural unemployment rate is pegged at 12.9%.

Another characteristic of employment status in Petauke is that due to lack of industries informal employment is much higher than formal employment. Interestingly enough out of 760,624 ³formally employed persons they are more men in formal employment numbering 500, 269 than women who are 200,355. While in informal employment you have 1,277,051 men and 1,028,795. These numbers are for the whole country; however, the numbers for Petauke might be slightly worse off owing to lack of economic opportunities in the district.

1.2.3 Social Economic Activities

1.2.3.1 Overview of Licensing Trends

PTC has a number of local taxes through which local revenue is generated to support its service delivery to the community. The key taxes from which significant revenue is raised include; business permits, health permits, liquor licenses, fire certificates as well as issuance of firearm and ammunition certificates.

The overall trends in licensing for PTC for the period 2016 to 2018 as can be seen in table1:4, generally reflected over performance in the actual revenue collected against the budgeted estimates. This scenario can be attributed mainly to the under estimation of expected revenues across the key licensing streams for the period under review.

Table 1:4 Key Licensing streams for Petauke Town Council

S/n	Type of license	2016 (Actual) ZMW	2016 (Budgeted) ZMW	2017 (Actual) ZMW	2017 (Budgeted) ZMW	2018 (Actual) ZMW	2018 (Budgeted) ZMW	TOTAL (Actual) ZMW	TOTAL (Budgeted) ZMW	Overview (%)
1	Business Permit	433,529.24	320,000.00	319,556.00	340,000.00	470,039.00	435,300.00	1,223,124.24	1,095,300.00	111.7
2	Health Permit	268,653.00	28,200.00	170,986.00	28,200.00	153,815.00	120,000.00	593,454.00	176,200.00	336.8
3	Liquor License	10,165.00	10,530.00	14,880.00	10,530.00	4,639.00	10,530.00	29,684.00	31,590.00	94.0
4	Fire Certificate	152,649.00	118,600.00	138,115.00	118,600.00	176,349.00	190,000.00	467,113.00	427,200.00	109.3
5	Firearm & ammunition	8,400.00	6,000.00	4,950.00	8,880.00	10,130.00	4,200.00	23,480.00	19,080.00	123.1

³ Numbers in italic sourced from CSO and refer to total formal working population –Zambia at a glance 2017

1.2.3.2. Public Health

The district is faced with a number of public health issues affecting the wellbeing of the communities. According to the morbidity records obtained from the Petauke District Health Office, the health status for the period 1st January to 31st August 2018 show that the district had ten (10) causes as highlighted in table 1:5 below:

Table 1:5 Top 10 Causes of morbidity

SN	Disease	All age cases	All age incidences
1	Respiratory infections	51,309	181
2	Malaria confirmed cases	41,419	173
3	Muscular skeleton & connective tissues	10,745	38

8	Skin diseases not infectious	2,473	9
9	dental carries	1,666	6
10	Throat diseases	1,509	5

(Source: PDHO, 2018)

As can be seen from table 1:5 above, the most prevalent causes of morbidity were respiratory infections and malaria i.e. 51, 309 and 41, 419 respectively for all ages' cases.

Subsequently, information regarding suspected and confirmed malaria cases for the period under consideration was 129, 624 and 57, 330, respectively. The scenario therefore requires concerted efforts from all stakeholders in making Petauke district a malaria free zone.

Despite the interventions, diarrhea cases are still endemic according to seasons and most cases are recorded in areas that lack access to safe and clean water, for instance, during the last rainy season, the district recorded 49 suspected cases of cholera and of these 4 cases were confirmed. The cases were mainly from the newly created Lusangazi district in Ukwimi area.

1.2.3.3 Status of Waste Collection in the District

Waste management in the district is currently restricted to the township boundary. As a result of limited resources, the coverage area for waste management is approximately thirty percent (30%) of the township. The areas covered include; CBD, main market, Chileya market, Turn-off area, Showground area as well as paid up properties such as lodges, learning institutions and other commercial ventures.

Waste management is undertaken from Monday to Saturday and daily waste collection is estimated to be sixteen (16) tonnes. The waste collected is dumped at a designated dumpsite. Presently, no waste management is embarked on in residential places, however, there are plans to extend the services to these areas at a fee.

1.2.3.4. Quality of Water

In a study of ground water in Petauke town conducted by S. Mbewe in 2013, the study revealed that groundwater in the town was characterised by low pH (6.17), High iron (2.63 mg/l) and high bicarbonate content (609.6 mg/l), high total hardness (As 598 mgCaCO₃/l) and the abundance of major ions were in the order of Ca > Mg > Na > K = HCO₃ > Cl > SO₄. Hydrochemical facies identified were Ca-HCO₃ and Ca

(Mg) HCO₃ type. Fifty eight percent of groundwater was hard, 26% was moderately Hard, 14% was very hard and only 2% was soft. Observed values of most of the Parameters fell within the ZABS and WHO guidelines for drinking water except for Nitrate (10%), total coliforms (72%), faecal coliforms (56%), pH (28%), iron (24%) And total hardness (58%). The analysis of variance showed that there was no significant seasonal variation in groundwater quality. Groundwater contaminants in the town were found to be total and faecal coliforms, nitrate, pH, iron and total hardness.

Despite Petauke not having major industrial pollutants, there are anthropogenic activities that could be of great concern with regards to groundwater quality namely the use of pit latrines and septic tanks in both low and high density areas and the use of fertilizers in areas near the Nyika Plain. A serious short coming on the groundwater quality, is the void or lack of baseline information on the dissolved groundwater chemical constituents in the town, a situation that greatly affects the effective planning and Management of the resource.

Nevertheless, the findings of this study revealed that groundwater sources (boreholes) in Petauke Town are microbiologically contaminated, mostly by total and faecal coliforms. In particular, 70-80% of boreholes in the dry and wet season respectively could not meet the ZABS (2008) and WHO (2008) requirements for water intended for drinking because they contained total and faecal coliforms per 100ml volume of groundwater analysed.

1.2.3.5 Water Supply Coverage (Urban and Rural)

a. Rural Water Supply

In its mandate, PTC ensures the provision of safe and clean water to the rural communities of Petauke District. This is done through the drilling of boreholes, rehabilitation and repair of broken down boreholes and the construction of small piped water schemes. PTC like many other local authorities relies greatly on boreholes fitted with India Mark II hand pumps for the supply of clean and safe water to the rural communities. In total, Petauke District has 866 boreholes that are servicing the communities. Out of the 866 boreholes, 737 are functioning with reminder of 129 not functioning. Of the 129 that are not functioning, 69 are non repairable while 60 can be repaired through rehabilitations.

With a projected population of about 260,624 from the baseline data of 2010 population which stood at 208,476, Petauke District needs about 1043 individual boreholes if it is to achieve 100% coverage. This is according to the MLG guidelines that a single borehole can effectively cover a population of about 250 people. For this reason, Petauke District rural water supply coverage of about 76.4%.

b. Urban Water Supply

For the provision of water in urban and Peri-urban areas of Petauke District, the mandate has been given to Eastern Water and Sewerage Company (EWSC). In its endeavor to provide water, EWSC has the following figures in terms of connections in different locations;

Table 1:6 Water Connections points in Urban area

S/N	AREA/ LOCATION	No. OF CONNECTIONS
1	Tasala/ Stambuli	369
2	Showgrounds	614
3	Turnoff	88
4	Anusa	129
5	Boma Area	195
6	Chimate	45
7	D.Compound	34
8	Fairview	204
9	Kanfinzi	120
10	Kanjoka	103
11	Katete	21
12	Main Location	160
13	Mayadi	125
14	New Houses	94
	TOTAL	2,301

1.2.3.6 Health Inspection

The total number of inspectable premises that are on record in the district is 1, 673. Out of these, the total number of premises inspected as at August 31st 2018 was 930 representing 55.6 percent coverage. From these 21 bars had been closed indefinitely for operating under unsanitary conditions. The closed bars are from Chileya market and Showground areas.

The breakdown of health inspections of inspectable premises is listed in Table 1:7 as follows:

Table 1:7 Health Inspections of Inspectable premises

SN	Description	No of premises	No of Inspected Premises	Percentage
1	Retail shops	940	340	36.2 %
2	Bars	281	250	89 %
3	Butcheries	11	11	100 %
4	Restaurants	104	104	100 %
5	Guest houses	73	50	68.5 %
6	Prisons	2	2	100%
7	Schools	179	90	50.3 %
8	Grinding mills	83	83	100 %
	Total	1, 673	930	55.6 %

1.2.3.7 Status in Economic Sectors

In 2017, Zambia's economy showed signs of improvement with a growth rate of 3.9% (from a 3.8% 2016)⁴ . This growth was led in part by a bumper harvest and improved electricity generation. Growth is further projected to strengthen to above 4% beyond 2018 predicated on the performance of emerging market economies and improved capacities of the Zambian mines. However, the fiscal-debt remains worrisome and could potentially eclipse other positives in the economy.

⁴ <http://www.worldbank.org/en/country/zambia/overview>

We now analyze economic sectors that we as a district can take advantage of and leverage to improve the standard of living for our communities.

a. Agriculture

Agriculture is the major occupation of Eastern province in general and Petauke in particular. It stands to reason that access (or lack of) to input/output markets and extreme weather patterns has the potential to affect our local economy and the Zambian economy in general. With this in mind our interventions will focus on increasing yields and incomes while mitigating adverse weather patterns.

CSO carries out Crop Forecast Surveys (CFS) in collaboration with Ministry of Agriculture. The aim is to gather data from farmers on area planted, expected production, expected sales and amounts of fertilizer used. Findings from the CFS for 2017/2018 marketing season indicate expected production has increased 12.1% for rice, 7.7% for groundnuts and 10.8% for Virginia Tobacco, 36.8 for Burley Tobacco, 14% for mixed beans, 60.8% for Bambara nuts and 20% for popcorn.

However, production is expected to decline by 33.6% for maize, 24.3% for sorghum, 0.9% for millet, 5.2% for sunflower, 13.9% for soya beans, 1.2% for seed cotton, 57.3% for Irish potatoes, and 45.1% for cow peas, 11.3% for sweet potatoes, 40.9% for wheat and 21.9% for barley. See table 1:8 below in particular the first row depicting maize production.

The implication of the decline in production of agro produce is that those heavily dependent on maize, sorghum and soya beans production will experience low incomes at household level leading to low disposable income in the district. Low disposable income in the local economy will invariably lead to low economy activity. Ultimately low economic activity in the district will affect Council's efforts to broaden the revenue base. Coupled with the potential fiscal challenges facing central government it means being innovative and creative in our resource mobilization.

Table 1:8 2017/2018 Crop Forecast Survey

National 2016/2017 Vs 2017/2018 Crop Forecast Survey, Area, Expected Production and Yield.									
	Area planted (ha)			Expected production(MT)			Yield rate ha/mt		
Crop	2016/2017	2017/2018	% change	2016/2017	2017/2018	% change	2016/2017	2017/2018	% change
Maize	1,644,741	1,392,546	(15.33)	3,606,549	2,394,907	(33.60)	2.19	1.72	(21.57)

Burley Tobacco	5,428	7,787	43.45	8,416	11,512	36.78	1.55	1.48	(4.65)
Mixed Beans	83,635	84,566	1.11	45,938	52,351	13.96	0.55	0.62	12.71
Bambara Nuts	6,235	7,253	16.33	4,377	7,039	60.83	0.70	0.97	38.26
Cow Peas	26,438 1	14,022	(46.96)	12,428	6,824	(45.09)	0.47	0.49	3.53
Sweet Potatoes	55,312	60,325	9.06	206,676	183,280	(11.32)	3.74	3.04	(18.69)
Wheat	26,773	21,709	(18.91)	193,713	114,463	(40.91)	7.24	5.27	(27.13)
Barley	857	936	9.20	6,529	5,102	(21.86)	7.62	5.45	(28.45)
Popcorn	9,149	11,190	22.31	7,829	9,459	20.82	0.86	0.85	(1.22)

b. Livestock

The current status of livestock farming in Eastern province is quite encouraging and with concerted efforts the province can become a leader in livestock farming. According to CSO-Zambia in Figures 2018⁵, the province stands at number three in cattle and goat rearing, while in pig and sheep rearing the province stands in first position. Petauke can most certainly consolidate the gains already made in livestock farming by improving productivity through excellent extension services and leverage livestock farming to support the beef industry and the attendant value chain activities such as Abattoirs, tanneries and butcheries. See Table 1:9.

Table 1:9 Livestock Statistics

Number Of Livestock By Province And By Type, 2016				
Province	Cattle	Goats	Pigs	Sheep
Central	636,538	1, 364,047	230,933	20,285
Copperbelt	68,847	185,449	134,135	11,241
Eastern	913,731	874,389	1,011,441	32,325

Source: CSO- Zambia in Figures 2018				

⁵ CSO does not disaggregate numbers beyond the province other than human population numbers

c. Commerce and Trade

Petauke has a lot of potential to drive industrialization in eastern province due to the vast agricultural outputs grown in the district. The major crops grown are maize, ground nuts, soya beans and sunflower. Cotton is grown as a cash crop and its market is readily available through a number of cotton companies.

As a district we are well placed to contribute to pillar 1 of the 7NDP that speaks of **economic diversification and job creation** through value addition in agro-business enterprises given that most of the raw materials are grown here. Other potential economic externalities will flow as a result of the construction of the railway line from Chipata to join the Tanzania Zambia Railway (TAZARA) as well as the bringing up to bituminous level the Petauke-Luamfwa road leading into South Luangwa National Park.

As economic opportunities are exploited and industrialization begins to take root demand for affordable houses will spike. Unless in our spatial planning we provide spaces for organic residential growth areas we might potentially end up with the informal settlement phenomenon. Once this problem takes root it becomes a challenge to deliver services in such human informal settlements which invariably leads to economical and social exclusion of such communities.

Some of the current key economic activities in our district are listed in table 1:10

Table 1:10 Key Economic Activities

Category	Number
Banks	4
Financial institutions	4
Ginneries	2
Breweries	2
Lodges	11
Retails and other trading premises	>400
Roofing industry	1

1.3 Local Government Institutional Framework

The legal basis for a local government system in Zambia is provided for in Part 8 of the constitution. Additionally, a number of relevant legislative texts help to define the scope of local government. These include, but not limited to, Local Government Act (Cap 281), Local Elections Act (Cap 282), Urban and Regional Planning Act 2015, The Service Commissions Act 2016 and the Public Roads Act.

PTC is a corporate body established under Cap 281 of the laws of Zambia. It is a local authority charged with the responsibility of providing municipal services to Petauke district in line with Cap 281 and other pieces of legislation. Although the Urban and Regional Planning Act No. 3 of 2015 designates Councils as planning authorities, PTC has not yet been designated as a planning authority. Nonetheless, the Council has a mammoth task of providing, among other services, sustainable land service that range from plot creation, allocation and development control whilst taking into account good planning practices like environmental sustainability.

The Council is a semi-autonomous institution and is the highest decision making body at the district level. It formulates policies in form of by-laws and also provides a forum for local representation of citizens through democratically elected local leadership that sits in the Council.

1.4 Organizational Structure of the Council

In line with the revised decentralization policy and its subsequent implementation effective date of 1st January, 2015 organizational structures in Councils have undergone realignment to reflect the expansion that includes the devolved Ministries.

In addition to the realignments, Councils now fall into any one of three types of categories; namely City Council, Municipal Council or Town Council. Each of these categories has a proposed standardized structure with specific number of departments or units.

Overall each City Council is supposed to have nine departments. However, for Municipal and town Councils they each have eight and seven departments respectively. In the case of PTC the new structure will only be operationalized when fully decentralized, currently the structure is for administrative purposes, however, these are the proposed departments:

- I. Department of Finance and Commerce
- II. Department of Human Resources and Administration
- III. Department of Agriculture, Environment & Natural Resources
- IV. Department of Engineering & Infrastructure Services
- V. Department of Development Planning & Information Services
- VI. Department of Health Services
- VII. Department of Education Services
- VIII. Department of Community Development and Social Services
- IX. Department of Legal Services

The key differences among the three categories of the Council structures are that Town Clerks will head the City and Municipal Councils while the Town Councils will be headed by a Council Secretary. In addition, the City Councils will retain the Legal Services Department while the Municipal and Town Councils will have Legal units. Established field offices such as schools and health facilities will be retained as they are and will transfer to Councils in their current form. Lastly, staffing levels will vary from Council to Council depending on the density of the municipality and the concentration of economic activities.

See below figure 1 for the proposed Town Council structures:

Figure 1:1 Proposed Higher Level Organizational Structure for PTC

2.0 Situational Analysis

Our strategic planning process began with an objective assessment of the internal and external environments in which we are currently operating in. By using various data collection tools we were able to gather and analyze data which in turn informed the strategic planning workshop held over a five day period. We used two main survey tools, Organizational Diagnostic tool and Service Delivery tool. Both tools seek to capture in-depth knowledge, attitude and perception (KAP) of our stakeholders. The former was administered to internal stakeholders (Council employees) and the latter was administered to external stakeholders (service recipients).

In addition to the KAP surveys, during our planning workshop we also used other tools such as SWOT analysis, PESTLE, Problem and Solution trees. It was a rigorous exercise with one motif that our decision making should be evidence based. Findings of the rest of the situational analysis are described under the following headings.

2.1 In Situ Status of Physical Planning

In Situ status of physical planning refers to the current position with regard to land use planning. It is an exercise that designates and regulates the use of land in order to improve a districts community's physical, economical, and social efficiency and well being. The main objective of land use planning is to allocate land uses to meet the economic and social needs of people while safe guarding future resources.

PTC is not a Planning Authority as earlier stated, therefore, all land use/ local area plans are prepared by the Eastern Provincial Planning Authority (EPPA). The Council does not have the mandate to approve building plans or grant building permission. The Council's role is to endorse plans and forward them to EPPA for approval.

The current planned number of plots in the Township is six thousand five hundred and seventy one (6571) of which twenty-four (24) are planned as open spaces. Out of the planned plots seven hundred and twenty (720) are numbered while seven (7) plots are unnumbered. Two thousand nine hundred and eighty five (2985) have not yet

been offered however on the ground they may be some development because they fall within the Informal settlements areas.

These plots are categorized in township neighborhoods (zones) as follows:-

- Hillside -647
- Mayadi - 427
- Main Location - 528
- Town Center - 275
- Kamfinzi - 325
- Industrial Zone - 56
- Nyika/ Nyika (Extension) Area -1 527
- Turnoff Area - 332
- Fairview - 528
- Riverside – 1926

The total number of plots that are on offer is approximately three thousand (3000). Other properties existed even before the township was created and the owners have never bothered to legalize their properties. Others have been developed illegally with no application or offer from the Council. Due to poor record keeping it has been a challenge to establish how many plots are undeveloped. The Council however has started the process of digitizing the land records which will make extraction of information easy.

According to the 2010 Valuation Roll for Petauke the total number of properties on the Roll are seven hundred and twenty seven (727) broken down as follows:-

- Commercial plots 112
- Industrial plots 2
- Residential plots 613; these are broken down into:-
 - High cost - 96
 - Medium cost -235
 - Low cost – 282

Currently there are more properties on title in the district than what is on the Valuation roll and the discrepancy will be captured in the updated roll which Council has

planned to commence in order to replace the 2010 Valuation Roll which has since expired.

According to the 2010 Valuation Roll for Petauke the total number of properties on the Roll is seven hundred and twenty seven (727) and approximately three thousand (3000) have been offered by the Council giving only about twenty four percent (24%) of those offered and have managed to acquire title. It should be noted that the 24% is based on the 2010 Valuation Roll but the current percentage may not even be beyond 60% of the offered plots which are on title.

The major challenge that the district faces in processing of title deeds is the lengthy procedure involved. Submissions are made to the province at the office of the Provincial Lands Officer, however, due to inadequate staff to attend to requests from all the districts in the province this tends to lengthen the process. With lengthen processes the inevitable happens, missing files and misplaced files requiring the districts to resubmit the applications.

In addition, the system for processing title deeds requires authorization by three officers meaning that the Provincial lands officer has to submit the files to Lusaka for authorization and depending on the availability of resources it can take longer to make the submissions. This has a multiplier effect on the development of the district because clients will have to wait for their offers without which the EPPA cannot consider the applications for building permission. The outcome is that some clients start to develop illegally while others endure delays in developing their parcels of land.

It also becomes a challenge for Council to conduct development control in such instances where a client is issued with a stop notice and asked to submit building plans for approval and when one submits the plans are not considered because they do not have an offer from lands.

The situation is however expected to improve in the area of development control given the council now has a town planner and two buildings inspectors. It's however worth noting that the rate of construction development is very high in the district such that even with these officers, the workload will still be high.

PTC is aiming at attaining Municipality status by end of 2019, it is expected that there will be more town planners and building inspectors employed as provided for in the organizational structure of a Municipal Council unlike at Town Council level where only one position is provided for.

In 2014, the Township boundary was extended from twenty three square kilometers (23km²) to one hundred and three square kilometers (103km²). Therefore the new township boundary measures approximately 6.7 km average radius from the post office. The Council to that effect made a resolution that land within the extended boundary be planned hence the EPPA through the office of the Provincial Planner was engaged to prepare a Local Area Plan (LAP) for the area. The LAP has since been adopted by Council under minute number PDC/SP/103/02/19 at a special meeting held on 1st February 2019 and will determine the kind of land uses for the area.

The new area will have commercial, residential and industrial plots. The heritage sites and other existing land uses will be incorporated in the new plan. There will be plots reserved for the manufacturing, hospitality industries, schools (primary, secondary and tertiary) and recreational facilities. Another notable feature identified in the landuse plan is the preservation of open spaces such as the Nyika Plains which acts as a natural hub for groundwater for the township. It is proposed that the Council will take ownership of the area and ensure that no person is allowed to put up any structures there but the area will just be for open spaces and play parks.

Like any other district Petauke has challenges of informal settlements. Currently the Council has begun the process of upgrading of informal settlements. The settlements being upgraded are Riverside, Hillside and Anusa.

Residents of informal settlements tend to be excluded from formal socio-economic activities. Usually they do not pay rates for their properties as well as other user fees such as business permits or licenses including water and sanitation.

In addition, service delivery in unplanned settlements whether it be roads, social amenities, water and sanitation are always a challenge to effect due to lack of physical planning in the designated areas.

Our district as already noted is a subsistence agricultural based economy whose people live predominately in the rural areas. The population development of Petauke district, in terms of urbanization, is in tandem with that of Eastern province unfortunately, CSO does not disaggregate certain data beyond province hence at provincial level we extrapolate what should be obtaining at district level (See Table 1:11).

Table 1:11 Projected Percent urban Population by Province and Year of Projection

Projected Percent urban Population By Province and Year of Projection(Medium Varian), Zambia 2011-2035						
Province	Year of Projection					
	2011	2015	2020	2025	2030	2035

Source: Zambia Population and Demographic Projections, 2011-2035						

2.2 Service Delivery Status

PTC is mandated under Cap 281 of the laws of Zambia to provide 63 municipals services. However, with the devolution of 15 functions from central to local government these services have increased to 78. A baseline survey was conducted to determine the knowledge, attitude and perception of our stakeholders towards our mandated service provision.

Stakeholders that participated in the service delivery survey were drawn from rural areas and the CBD. Those from rural areas were eight (8) communities from Mwanjawanthu chiefdom and two associations from the CBD area. Out of the 8

communities 5 demonstrated adequate knowledge of Council's mandate while 2 had limited knowledge and the 1 community could not define the Council mandate.

In terms of the general understanding of the services provided and how Council raises revenue, 4 of the communities were able to list at least 10 services provided by Council and 5 revenue sources. On the other hand, 3 communities were able to list an average of 6 services provided by the Council but only managed to cite 3 revenue sources. The other community could only list 4 services provided by the Council and only managed to state 2 sources of revenue for the Council.

Stakeholders were asked to list services they have received in the last 12 months and rank their level of satisfaction. The respondents were very satisfied with 1 service (Borehole drilling), they reported to be satisfied with 2 services (grading of roads, Dog destruction). However, they had no strong opinion on 1 service (trading licenses). They further reported that they were unsatisfied with 2 services (roads and repairing of culverts) and very unsatisfied with 2 services (construction of classroom blocks and pest control). Apart from borehole drilling there was a common dissatisfaction with general service delivery by the Council. When poor service delivery was subjected to problem analysis a potential cause identified was limited participation of stakeholders in decision making.

The other two groups of stakeholders representing urban dwellers were taxi and market associations. Individual stakeholders under the tax association demonstrated high knowledge of the mandate of the Council, and this is encouraging as the institution could use this as stepping stone for positive collaborations and engagements on many of the developmental undertakings. However, individuals under the market association demonstrated limited knowledge of the Council's mandate with respondents only bringing out issues concerning their welfare. These included cleaning, issuance of trading licenses and building of markets.

The local authority is generally perceived not to have executed its mandate to satisfactory levels. The concerns are that Council has not met people's expectations where service provision is concerned. For instance, stakeholders are not satisfied with

the level of service with regards to roads and drainage maintenance, waste collection, street lighting and provision of trading spaces among others.

2.3 Organizational Development

The organisational Diagnosis Questionnaire is a survey tool and feedback instrument designed to collect data on organisational functioning. It measures the perceptions of staff in the Council or department to determine areas of activity that would benefit from the Council's improvement effort. The questionnaire measures six variables: Policies, Goals and Objectives; Resource availability; Communication and Cooperation inside the department; Communication and Cooperation between departments; Procedures and Performance; and Creativity and Motivation. This tool was administered to Council staff.

Under the variable *Policies, Goals and Objectives* on average 7 people indicated they *strongly agreed* with issues of *Policies, Goals and Objectives* representing 12 % of those interviewed. Another 34 % or an average of 20 people indicated they agreed while 17% indicated they *agreed slightly*. These are good results that can be leveraged to increase productivity and support the fulfilment of the institution's mission of providing efficient, effective and quality service delivery, creating an eco-friendly and enabling environment that promote sustainable economic development.

Unfortunately under the variable *Resource Availability* the majority of employees were either neutral or disagreed slightly to disagreed strongly this seems to agree with one of the challenges facing Council that of *Inadequate Financial Resources*.

The next variable under OD is the *Communication and Cooperation inside the department* on average 38 people indicated that lines of communication were good and open representing 66% of the staff interviewed.

Communication and Cooperation between Departments is yet another variable that yielded positive results which can be used to improve multi-sectoral planning to carry out integrated service delivery. On average 37 people or 64% of the staff interviewed ranged from slightly agree to strongly agree.

The variable *Policies and Procedures* measures the perception or extent to which this is seen to be fair and applied across the board. Another positive result for PTC as 37 people out of the 58 interviewed indicated that they agreed with this variable.

The last variable of Creativity and Innovation was the only variable that had the highest number of neutral people 9 in total. However, those who slightly agreed or strongly agreed were still in the majority at 60% or 35 people interviewed indicating in the affirmative.

2.4 Human Resources and General Management

Human resource comprises the workforce of PTC as a representative institution that is responsible for implementing government policies at institutional level. Therefore human resource is a critical component in translating the vision, mission statements and strategies into tangible results. The implementation of this strategic plan can only be realized through a motivated and competent workforce who buys into the mission of PTC.

PTC as a local authority operates a representative type of Local Government, with elected local leaders (the Chairperson and Councillors) constituting the Council as community representatives. However, technically there is a Council Secretary who is the Principal Officer and Chief Executive Officer of the Council supported by other auxiliary staff.

The Council has a relevant organization structure based on its mandate in order to produce desired results effectively and efficiently. This requires a competent workforce with a mix of skills set for provision of quality service to the community. There is need to do management by outcome/result based with integrated approach interventions. Currently, Petauke Town Council has an establishment of 91 Division I, II and III employees and 142 Division IV employees.

The public perception of the Council is not favourable, it is associated with poor performance and lack of accountability, ineffective supervision, indiscipline, financial irregularities, and laissez-faire attitudes. An effective Performance Management

System can potentially work to reverse these attributes, but more importantly, can improve efficiency of the workforce at hand. The Annual Performance Appraisal System (APAS) has been introduced in all the local authorities; from institutional strategic plans, organizational goals are set which then translate into annual departmental work plans which also cascade down to the individual work plans were the correlation between the APAS criteria and the job descriptions must be synchronized.

2.5 Financial Resources

The treasury department is charged with the responsibility of preparing the Council's Mid Term Expenditure Framework (MTEF)/Activity based budget annually. Moreover, it provides statement of accounts to Council. Treasury also controls income and expenditure of the Council in line with the budget provision as well as maintenance of the cash books.

One of the strategic issues identified in the situation analysis is inadequate financial resources and this is supported by the figures from table 1:12 of the analysis of revenue collection efficiency. As can be seen from the table the major revenue sources are rates on private properties, levies, charges, other fees and charges and Miscellaneous Income/Grants. Despite these sources being huge amounts rarely do collections exceed budget figures and this is true of all other revenue collection.

See below table 1:12 below.

Table 1:12 ANALYSIS OF REVENUE COLLECTION EFFICIENCY: PTC 2014-2017

	Budget	2014	%	Budget	Actual	%	2015	%	Budget	Actual	%	2016	%	Budget	Actual	%	2017	%

2.6 Physical Resources Management

Assets or physical resources are anything owned by an organization that have a monetary value. Councils' fixed assets include properties (buildings and the land they occupy), vacant land, infrastructure assets (mainly roads and bridges), vehicles, plant and machinery, and Information Communication Technology (ICT) hardware. Councils spend quite a lot of money on property running costs therefore good asset management is essential for a council to demonstrate that it is providing Best use and value.

During our situation analysis it was observed that not all assets owned by PTC are captured in our inventory. It was mentioned that a farm owned by the Council is not reflecting in our books. Apart from bad record keeping, PTC has aging infrastructure which is at a risk of complete breakdown. In order to achieve the highest standards of financial stewardship, efficient and effective use of our resources will entail commissioning best value audits and local work audits.

Moreover Council needs to ensure that service needs drive our asset management strategies. Similarly, Councils' asset management arrangements must lead to increased efficiency while demonstrating effective arrangements for managing the performance of our assets.

2.7 Strategic Issues

After an exhaustive situation analysis which involved using a variety of analytical tools such as KAP surveys, SWOT, PESTLE frameworks, a number of strategic issues began to emerge. In addition to using analytical frameworks we consulted a number of policy documents such as the constitution and the 7NDP among others to identify and refine the strategic issues. These are issues if not resolved will pose serious challenges in achieving the higher goals of PTC. These include:

i. Inadequate Financial Resources

Our situation analysis revealed Inadequate Financial resources was one challenge that kept coming up across the board as a reason for not providing services. When subjected to problem tree analysis potential causes were poor asset and financial management, failure to optimize revenue collection, low user fees and reliance on traditional income flows.

ii. Poor Governance

One of the chief cornerstones of decentralization is the full participation of communities in joint Council decision making. Unfortunately the KAP survey revealed very limited participation of communities in decision making. When this issue was further interrogated non existence of Ward Development Committees (WDC) was identified as the root cause for the limited participation of stakeholders. Other causes of poor governance include lack of transparency and low civic awareness.

iii. Poor Service delivery

Inadequate financial resource was identified as one of the major causes of poor service delivery. Alongside this issue lack of equipment, aging infrastructure, silo planning and lack of management information system (MIS) were cited as contributing factors to poor service delivery.

iv. Internal Processes

As the cause-effect analysis was carried out on poor service delivery an emerging issue on how we carry out our work, the processes and procedures, contributed to the perception of poor service delivery. Therefore a revisit of work processes, systems, procedures and establishing a standard performance will improve the turnaround time for service requests.

v. Good Stewardship of the Natural and Built Environment

One of the strategic issues not captured in the KAP survey but is certainly a topical issue both on the global agenda as enshrined in the sustainable development goals (SDGs) and in the Zambian policy document 7NDP is rapid environment degradation and its impact on climate change. Ironically, rapid environment degradation is caused by poor people trying to etch out a living either through charcoal burning, forest clearing for agriculture or just hunting for a local delicacy without knowing the effects of earning a livelihood is contributing to their vulnerability.

3.0 Planning Process

The planning process was systematic, consultative and participatory with key stakeholders taking part in the baseline studies and the planning workshop. Some stakeholders were consulted during the baseline study using a KAP survey while others were part of the strategic planning workshop.

A situation analysis preceded the planning workshop in order to assess the knowledge, attitude and perception of both internal and external stakeholders. The output of the surveys fed into the planning workshop and was subjected to further analysis using the SWOT, PESTLE and Problem tree analysis tools. Using a number of analytical tools we not only got an in-depth understanding of various stakeholders' knowledge, attitude and perceptions but it also provided a process of validating survey findings (evidence-based).

3.1 Vision and Mission

After the situational analysis a picture emerged of what the future for Petauke should look like. Looking forward we envisage Petauke district to be:

Vision

"A Clean, Healthy, and Green Town that is connected and inclusive of all in local economic growth"

This Vision will be achieved by fulfilling our mission which is to:

Mission

"To provide efficient, effective and quality service delivery, while creating an eco-friendly and enabling environment that will promote economic development"

3.2 Values and Principles

We stand firm in our belief that shared values among our staff will promote the necessary work culture to achieve our mission thus enabling us fulfill our vision and mission. The values we believe are essential in our pursuit of a clean, healthy and green town are:

1. Unity of purpose

- Our focus in moving forward will be how we collectively serve with our stakeholders.
- Integrate service delivery to push down costs and increase value.
- We must be of one accord speaking one language.

2. Accountability

- Taking responsibility for our actions, we set clear goals, use evidence to inform decisions and measure results.
- Means we behave ethically and with integrity, we tell the truth, we keep our commitments and we meet both the spirit and intent of the law.

3. Integrity

- Adheres to ethical standards in the conduct of the organization's business and is committed to a life of excellence.
- Establishes rules which are fair and ethical.
- Creates and sustains an atmosphere that fosters a culture of openness, inclusion, compassion and trust.

4. Reliability

- Defined work processes that ensure consistence and replication.
- We say what we will do and we do what we say.
- We have a minimum standard of performance for each service level.

5. Transparency

- We have administrative systems and procedures that are seen to be fair and consistent.
- We are committed to openness in the manner we do business.
- Both our internal and external communication channels will exhibit low asymmetry information.

6. Team Spirit

- We are one company, one team. We are committed to a teamwork environment where every person is a valued member, treated with respect, encouraged to contribute and recognized and rewarded for his/her efforts.
- A commitment to common goals based on open and honest communication while showing concern and support for each other.
- Our team is supportive of each other's efforts, loyal to one another, and care for each other both personally and professionally.

3.3 Strategic themes, Outcomes and Goals

Strategic themes are the various strategic issues clustered under one theme or one key result area to guide in decision making and programming. Each theme represents issues which must be resolved for us to achieve the Mission and Vision statements. Consequently each theme has a result or outcome of what we want each theme to look like and the strategies to achieve the goals under each strategic theme.

3.3.1 Strategic theme 1: Strong Financial Stewardship

Strategic Outcome SO1: Improved Council's fiscal sustainability

Strategic Goal SG1: To ensure Sound Financial Management

Strategies SG1

- i. Establish financial policies, procedures and systems that represent best practices.
- ii. Implement linkage between budget and strategic planning.
- iii. Transparent financial decisions that are appropriately communicated to the public.
- iv. Sustainably manages all Council owned properties in the best interest of the broader community.

Strategic Outcome SO2: Improved Revenue Collection

Strategic Goal SG 2: Expand the revenue base

Strategies SG 2:

- i. Develop and implement a Resource Mobilization Strategy.
- ii. Implement an Asset Management System.
- iii. Establish special purpose vehicles to run as business entities.
- iv. Overdue debt more than 90 days earmarked for litigation.

3.3.2 Strategic Theme 2: Good governance

Strategic Outcome SO 1: Improved Strategic Partnership and Stakeholder engagement

Strategic Goal SG 1: Ensure maximum participation of stakeholders

Strategies SG 1:

- i. Engage and keep the community informed about Council activities and proposals.
- ii. Communicate matters of importance to the local communities in an open and transparent manner.
- iii. Seek the views of the community and ensure engagement in the decision making process of Council.
- iv. Ensure low information asymmetries.
- v. Improve awareness of civic education among stakeholders.
- vi. Strengthen capabilities to establish and maintain partnerships; and
- vii. Develop opportunities for effective partnerships and sharing of responsibilities.
- viii Establishment of neighbourhood watch committees

3.3.3 Strategic Theme 3: Service Delivery

Strategic Outcome SO 1: Innovative Service Delivery

Strategic Goal SG 1: Promote Integrated service delivery

Strategies SG 1:

- i. Develop a mix of service delivery channels using technological trends.
- ii. Service delivery models to be designed around stakeholders' needs.
- iii. Research and Development in order to build stakeholder insight and database.
- iv. Improve equitable access to social services and infrastructure especially for persons with disabilities.
- v. Integration and coordination planning between Council and other stakeholder organizations.
- vi. Assess service delivery options, including comparing providing services directly versus providing through contractors.
- vii. Ensure low information asymmetries.
- viii. Increase public participation in planning and budgeting
- ix. Increase awareness of civic education among stakeholders

Strategic Outcome SO 2: A local Vibrant Economy

Strategic Goal SG 2: Economic growth and job creation

Strategies SO 2

- i. Provide a broad range of services that encourages new investment and sustainable economic development.
- ii. Encourage and support the establishment of creative and innovative businesses and industries.
- iii. Support the production and sale of local fresh food and value added products.
- iv. Reduce inequalities through integration of the informal sector into the mainstream of the economy.
- v. Stimulating local economic development.
- vi. Develop standards for grading of various food trading premises with emphasis on quality of product.

3.3.4 Strategic Theme 4: Internal Processes

Strategic Outcome SO 1: Superior Operational Excellency

Strategic Goals SG1: Improving the efficiency and effectiveness of administrative processes and systems

Strategies SG1:

- i. Implement policies, procedures and best practice, and redesigning processes to meet user requirements.
- ii. Provide strategic plans, policies and particular programs that assist Council plan for the future.
- ii. Integration and coordination of planning between departments.
- iii. Use of enabling Information Communication Technology.
- iv. Establish performance management systems.
- v. Ensure skills sets match job description and continuous upgrading of skills sets.
- Vi Develop and implement a Service Delivery Charter

3.3.5 Strategic Theme 5: Good Stewardship of the Natural and Built Environment

Strategic Outcome SO 1: Enhanced Natural and Built Environment Stewardship

Strategic Goal SG 1: Promote sustainable land use and infrastructure management.

Strategies SG 1

- i. Ensure sound strategic land use planning and asset management provides the basis for sustainable future development and infrastructure investments.
- ii. Assess long term accommodation needs within the community and support housing diversity and choice.
- iii. Protect agricultural land that has the capacity for local food production.
- iv. Ensure there is appropriate public parking facilities within each of the municipality's commercial centres.
- v. Provide pathways that improve safety and accessibility for pedestrians, cyclists and other users to make it easier to choose active transport for local trips and recreation.

Strategic Outcome SO2: A clean, healthy and green town

Strategic Goal SG2: *Improved environment through engagement of local communities*

Strategies SG2

- i. Foster community understanding of environmental issues so as to promote sustainable behaviour.
- ii. Continue efforts to reduce water quality impacts of septic systems.
- iii. Establishment of sewerage treatment plant & network
- iv. Identify sites and develop systems for solid and liquid waste management
- v. Promotion of waste separation at source or final disposal point for purpose of recycling, re-use and composting
- vi. Protect agricultural land that has the capacity for local food production.
- vii. Enforce regulations that protect the safety, amenity and convenience of the public.
- viii. Support increased participation in physical activities, through the planning, delivery and advocacy of appropriate recreation and sporting services and facilities.
- ix. promote sustainable forest management

Strategic Outcome SO 3: Resilient communities with capabilities for withstanding disasters

Strategic Goal SG 3: *Promote diversification from crop to livestock farming*

Strategies SG 3

- i. Assist in developing resilient communities that are prepared for emergencies and supported in times of critical need.
- iii. Adopt new technologies of farming that increases yields while replenishing soil nutrients.
- iv. Promote sustainable forest management through Re-skilling charcoal burners to protect the forest and harvest honey instead.

4.0 Costs and Estimates

Table 1:13 Cost and Estimates

No,	STRATEGIC THEME	TIME PLANNING					
		2019 K.00	2020 K.00	2021 K'00	2022 K'00	2023 K'00	TOTAL K'00

Total		13,536,822.00	14,890,570.20	16,379,627.22	18,017,589.94	19,819,348.94	82,185,015.30

5.0 Strategic Management and Implementation

Description			
Strategic Theme 1: Strong Financial Stewardship			
Strategic Outcome SO 1: Improved Councils fiscal Sustainability			
Strategic Goal SG 1: To ensure sound financial management			
Intended Result	Unit of measurement/ means of verification	Performance Indicators	Strategy
- Maximised revenue generated - Prudent utilisation of financial resources - Increased investment portfolio	# of audits completed and improvements made. # of audit queries	- One consolidated financial policy, procedure & system on revenue generation developed - One consolidated policy, procedure governing expenditure developed - Copies of financial policy, procedure & systems governing revenue and expenditure	Establish financial policies, procedures and systems that represent best practices.
Budget execution tailored to achieving the aspirations contained in strategic plan	# of annual budgets that are aligned to Stratplan	Developed annual budgets that are aligned to the goals and core objectives of the strategic plan	Implement linkage between budget and strategic planning.
Well informed communities	Copies of audited financial statements published	# of audited annual financial statements published	Transparent financial decisions that are appropriately communicated to the public.
- Increased revenue base - Conducive working environment - Well maintained council properties	# of properties maintained # of acquired assets # of assets disposed in line with the policy	- Maintenance policy formulated and implemented - Acquisition policy developed and being implemented - Disposal policy developed and implemented	Sustainably manages all Council owned properties in the best interest of the broader community
Strategic Outcome SO 2: Improved Revenue Collection			
Strategic Goal SG 1: Expand Revenue base			

Intended Result	Unit of measurement	Performance Indicators	Strategy
Increased revenue generated	Copy of Resource mobilisation strategy	Resource mobilisation strategy developed & implemented	1. Develop and implement a Resource Mobilization Strategy
Proper managed assets	Copy of asset management system developed	Asset management system developed	2. Implement an Asset Management System
Increased revenue generated	# of court summons served & executed	# of court summons served & executed	3. Overdue debt more than 90 days earmarked for ligation.
Increased revenue generated	# of warrants	Number of warrants of distress served	4. Issuance of warrant of distress
Description			
Strategic Theme 2: Good Governance			
Strategic Outcome SO 1: Full participation of local communities in Council affairs			
Strategic Goal SG 1: Improved Strategic Partnership and Stakeholder engagement			
Intended Result	Unit of measurement/ means of verification	Performance Indicators	Strategy
Improved decision making	# of stakeholders providing technical and other support	Stakeholders providing technical and other support increased	1. Engage and keep the community informed about Council activities and proposals.
- Improved decision making - Improved participation of the community in council activities	- Attendance registers # of objections/acceptance # of plot advertisements/interviews conducted - Committee reports # of public notices on council decisions	% increase in number of engagement/consultative meetings conducted on matters affecting council and the communities - Number objections/acceptance to council proposals % increase in transparency regarding land administration/trading spaces	2. Communicate matters of importance to the local communities in an open and transparent manner. 3. Seek the views of the community and ensure engagement in the decision making process of Council.

- Increased participation, involvement of the public in council affairs - Improved decision making	# of attendance registers for public observing council meetings - copies of programmes/announcements/advertisements # of questionnaires administered	% increase in the general public observing the council meetings # of notices dispatched/displayed # of radio programmes/announcements/advertisements # of programmes/announcements/advertisements on social media # of awareness campaigns on civic matters in various media	4. Ensure low information asymmetries.
- Increased participation, involvement of the public in council affairs - Improved decision making	Copies of awareness messages/ posters/ brochures /scripts		5. Improve awareness of civic education among stakeholders.
- Strengthened partnerships - increased infrastructure development - Improved financing to projects	- Copies of signed MoUs % increase in the number of programmes and projects undertaken jointly with partners	# of partnerships established 15% increase in the number of programmes and projects undertaken jointly with partners	6. Strengthen capabilities to establish and maintain partnerships; 7. Develop opportunities for effective partnerships and sharing of responsibilities
improved public safety, security and governance	# of community driven projects that improve community safety # of neighbourhood watch groups established - Kilometers of roads with installed street lights	# of neighbourhood watch groups established % decrease of crimes % decrease of accident reports % increase in response to emergencies - Kilometers of roads with installed street lights	8. Establishment of neighbourhood watch committees 9. Improved lighting in public places i.e. streets, markets and CBD 10. Awareness and road safety campaign
Description			
Strategic Theme 3: Service Delivery			

Strategic Outcome SO 1: Service Innovation			
Strategic Goal SG 1: Promote Integrated Service Delivery			
Intended Result	Unit of measurement	Performance Indicators	Strategy
Exceed Clients Expectations	% reduction in clients' complaints	95% reduction in the # of complaints by 2020	1. Develop a mix of service delivery channels using technological trends.
	# of service delivery surveys # of innovative service delivery systems developed	# of service delivery surveys undertaken # of innovative service delivery systems developed - One Central data base established	2. Service delivery models to be designed around stakeholders' needs.
	One Central data base established		3. Research and Development in order to build stakeholder insight and database.
- Equitable access to social services and infrastructure - Developed infrastructure that takes care of needs of persons with disabilities	- Number of social services and infrastructure constructed in key locations - Number of infrastructure designed and constructed to meet needs of persons with disabilities	# of social services and infrastructure constructed in key locations # of infrastructure designed and constructed to meet needs of persons with disabilities	4. Improve equitable access to social services and infrastructure.
- Improved coordination/cooperation of all stakeholders - Enhanced synergies between council and others stakeholders - Development of integrated development plans	# of joint planning/engagement meetings	% increase in # of joint planning/engagement meetings between council and other service providers and stakeholders	5. Integration and coordination planning between Council and other stakeholder organizations.

Improved service delivery value for money	# of pilot projects undertaken to assess service delivery options	# of pilot projects undertaken to assess service delivery options. i.e. labour versus full contracts on various projects	6. Assess service delivery options, including comparing providing services directly versus providing through contractors.
Improved information sharing between the council and stakeholders	# of periodic integrated departmental meetings # of reports shared	# of periodic meetings between council and other stakeholders # of reports shared	7. Ensure low information asymmetries.
Improved public participation in planning and budgeting.	# of engagement/consultative meetings conducted on budgeting planning & # objections/acceptance to council proposals	% increase in the # of engagement/consultative meetings conducted on budgeting planning & # objections/acceptance to council proposals # of awareness campaigns on civic matters in various media	8. Increase public participation in planning and budgeting 9. Increase awareness of civic education among stakeholders
Description			
Strategic Theme 3: Service Delivery			
Strategic Outcome SO 2: A local Vibrant Economy			
Strategic Goal SG 2: Economic growth and job creation			
Intended Result	Unit of measurement	Performance Indicators	Strategy
1. Attract investment 2. Create new jobs	# of investors pledge to invest # of business permits issued # of new jobs being created # of industries being created	# of actual investors establishing entities - Permits and licences being renewed # of jobs created as a result of broad services provided	1. Provide a broad range of services that encourages new investment and sustainable economic development
- Increased investment opportunities - Sustainable local economic development	- Quantity of land allocated and developed for new investment - A deliberate policy to support existing and potential MSMEs	- Quantity of land allocated and developed for new investment for purposes of commercial ventures - A deliberate policy to support existing and	2. Encourage and support the establishment of creative and innovative

	investment in the district developed	potential MSMEs investment in the district developed	businesses and industries.
	# of conducive trading places specifically allocated for sale of fresh food and value added products # of agro processing industries established	# of conducive trading places specifically allocated for sale of fresh food and value added products # of agro processing industries established	3. Support the production and sale of local fresh food and value added products.
	- Quantity of land allocated and developed # of jobs created as a result of broad services provided # of low cost trading spaces created # of food trading premises graded	# of low cost trading spaces created that promote or encourage inclusiveness # of gender responsive sanitary facilities within public places such as markets, bus stations, libraries etc.	4. Reduce inequalities through integration of the informal sector into the mainstream of the economy.
			5. Stimulating local economic development
Competitiveness in the food industry stimulated	# of food trading premises graded	# of food trading premises graded	6. Develop standards for grading of various food trading premises with emphasis on quality of product
Description			
Strategic Theme 4: Internal Processes			
Strategic Outcome SO 1: Superior Operational Excellency			
Strategic Goal SG 1: Improving the efficiency and effectiveness of administrative processes and systems			
Intended Result	Unit of measurement	Performance Indicators	Strategy
- Happy stakeholders; 2. Less bureaucratic systems	# of complaints # of service requests actually processed	- Number service level agreements - Amount of time taken to resolve complaints	1. Implement policies, procedures and best practice, and redesigning processes to meet user requirements.

Improved service delivery	# of strategic programmes and activities implemented	# of strategic programmes and activities implemented	2. Implement strategic plans, policies and particular programs that assist Council that takes care of future needs.
- Improved workmanship - Well-coordinated workforce	# of management meetings held - Quarterly general meetings held between management and the general staff	# of management meetings held - Quarterly general meetings held between management and the general staff	3. Integration and coordination of planning between departments .
Improved individual staff performance	- Performance management systems developed and implemented # of quarterly & annual work plans # of staff returns prepared # of Staff appraised # of staff undergoing continuous professional development	- Performance management systems developed and implemented - Timely preparation of quarterly & annual work plans - Timely preparation and review of staff returns - Staff performance appraisal undertaken annually # of staff undergoing continuous professional development	4. Establish performance management systems 5. Ensure skills sets match job description and continuous upgrading of skills sets
Quick turn round	# of departmental service delivery charters	# of departmental service delivery charters developed and implemented	6. Develop and implement a Service Delivery Charter

Description

Strategic Theme 5: Good Stewardship of the natural and built environments

Strategic Outcome SO 1: Enhanced Natural and Built Environmental Stewardship

Strategic Goal SG 1: Promote sustainable land use and infrastructure management.

Intended Result	Unit of measurement	Performance Indicators	Strategy
- Improved land use administration that is sustainable and supports future investments - Increased infrastructure	# of land use plans implemented	# of strategic land use plans developed and implemented for purposes guiding future developments and infrastructure investments	1. Ensure sound strategic land use planning and asset management provides the basis for sustainable future development and

			infrastructure investments.
Increased access to diverse and affordable housing accommodation	# of people with access to accommodation	# of feasibility studies undertaken on housing needs. # of diverse housing projects undertaken.	2. Assess long term accommodation needs within the community and support housing diversity and choice.
• Easy location of properties • Well planned townships	# of roads named # of existing plots having plate numbers displayed # of plots numbered for purpose of issuance	# of roads named # of existing plots having plate numbers displayed # of plots numbered for purpose of issuance	3. Road naming exercise and plot numbering
• Developed public parking spaces in all commercial centres that equally meet needs of persons with disabilities • Improved access to sanitary services in public places	• # of commercial centres with equitable public parking spaces • # of gender responsive sanitary facilities	• # of commercial centres with equitable public parking spaces that equally meet needs of persons with disabilities • # of gender responsive sanitary facilities within public places such as markets, bus stations, libraries etc.	4. Ensure there is appropriate public parking facilities within each of the municipality's commercial centres.
• Improved safety and accessibility for all road users (pedestrians, cyclists, motorists, and other special users)	• Kilometers of roads designed and constructed with features that provide for access and safety of all roads users	• Kilometers of roads designed and constructed with features that provide for access and safety of all roads users	Provide pathways that improve safety and accessibility for pedestrians, cyclists, and other users to make it easier to choose active transport for local trips and recreation
Description			
Strategic Theme 5: : Good Stewardship of the natural and built environments			
Strategic Outcome SO 2: A clean, healthy and green town			
Strategic Goal SO 2: Improved environment through engagement of local communities			
Intended Result	Unit of measurement	Performance Indicators	Strategy
1. Improved environmental management	• # of stakeholder meetings • Attendance register for meetings & campaigns	• % increase in the # of environmental educational meetings & engagements conducted.	1. Foster community understanding of environment

		% increase in the # of environmental educational campaigns conducted.	al issues so as to promote sustainable behaviour.
- reduction in water borne infections - safe and clean water supply	# of water quality tests # water points chlorinated	% increase in the # of water quality tests conducted % change in the chlorination of water points	2. Continue efforts to reduce water quality impacts of septic systems.
Improved sanitation in the district	- Treatment plant established - Incidences of ground water pollution	- Establishment of a sewerage treatment plant % reduction in ground water pollution	3. Establishment of sewerage treatment plant & network
- Reduced infections associated with poor solid waste management - Reduction in the accumulation of solid waste in the district - Abated land pollution	# of sites identified - Tonnage for collected solid waste # of systems operationalized for solid and liquid waste management. - Incidences of land and water pollution	# of sites identified and developed for solid and liquid waste management. % reduction in the uncollected solid waste # of systems operationalized for solid and liquid waste management. % reduction in land and water pollution associated with inappropriate liquid waste disposal	4. Identify sites and develop systems for solid and liquid waste management.
- Increased life span of the dumpsite - Sustainable waste management	# of waste separated # of recycled products # of re-used products - Tonnage of compost produced	% of waste separated % of recycled products % of re-used products % of compost produced	Promotion of waste separation at source or final disposal point for purpose of recycling, re-use and compositing
- Identified accommodation needs for the district - Developed bankable housing development plans /initiatives - Planned human settlements	- Feasibility studies conducted to establish existing and required long term accommodation and housing needs - Strategic land use plans with emphasis on agricultural land with capacity for local food production Implemented	# of feasibility studies conducted to establish existing and required long term accommodation and housing needs	5. Assess long term accommodation needs within the community and support housing diversity and choice.

- Increased agricultural production - Coordinated development	# of land use plans	# of land use plans developed with emphasis on protection of agricultural land	6. Protect agricultural land that has the capacity for local food production
safeguarded safety and convenience of the public	# confiscated of unsafe food & drink products # of prosecutions done relating to nuisances # of penalty charges for causing nuisance	% reduction in the sale of unsafe food & drinks products % reduction in nuisances such as noisy pollution, smell pollution	7. Enforce regulations that protect the safety, amenity and convenience of the public.
- Increased recreational and sporting facilities - Healthy, fit and active population	# of recreational & sporting facilities	Number of recreational and sporting facilities Planned and developed with full participation of the public.	8. Support increased participation in physical activities, through the planning, delivery and advocacy of appropriate recreation and sporting services and facilities.
- Well established maintained green environment/ woodlots - Reduction in the effects of climate change	# of Hectares planted. # of private & public gardens development & maintained	# of trees planted in public places such as streets, playparks, public buildings # of trees planted at work places and residential areas # of private & public gardens maintained & development - Number of degraded land rehabilitated through tree planting	9. Promotion of green environment
- Sustainable forestry management - Green environment	# of charcoal burner converted into bee keepers/honey producers. # of enforcement patrols conducted to curb forest degradation. # of community education awareness campaigns on sustainable forestry management conducted	% increase of charcoal burner converted into bee keepers/honey producers. # of enforcement patrols conducted to curb illegal charcoal harvesters. % reduction in hectare deforestation # of community education awareness campaigns on sustainable forestry management conducted	10. Promote sustainable forest management through Re-skilling charcoal burners to protect the forest and harvest honey instead. 11. Forestry conservation

		# of communities involved in conservation farming and agro forestry activities	and preservation
	# of households using alternative sources of energy	# of communities having alternative sources of energy	Promotion of green energy (alternative sources)
Description			
Strategic Theme 5: Good Stewardship of the natural and built environments			
Strategic Outcome SO 3: Resilient communities with capabilities to withstand disasters			
Strategic Goal SG 3: Promote diversification from crop to livestock farming			
Intended Result	Unit of measurement	Performance Indicators	Strategy
Reduce Vulnerabilities	# of families abandoning charcoal burning # of families trained in re-skilling # of families supported in times of critical need	- Alternative income generating activities i.e bee keeping - Improved yields for agricultural crops # of communities involved in crop diversification	1. Assist in developing resilient communities that are prepared for emergencies and supported in times of critical need.
Risk reduction	# of communities sensitized on issues of climate change # of farmers involved in crop diversification	60% of communities sensitized on issues of climate change 50% of farmers involved in crop diversification	2. Prepare for the impacts of future climate change by building community capacity and resilience.
	# of new farming technologies employed # of farmers involved in conservation farming and agro forestry activities	- New farming technology employed 50% of farmers involved in conservation farming and agro forestry activities	3. Adopt new technologies of farming that increases yields while replenishing soil nutrients.

6.0 Petauke Town Council Balance Score Card

Vision	A Clean, Healthy, and Green Town that is connected and inclusive of all in local economic growth			
Mission	To provide efficient, effective and quality service delivery, while creating an eco-friendly and enabling environment that will promote economic development			
Core Values	Unity of Purpose, Accountability, Integrity, Reliability, Transparency, Team Spirit			
Strategic Themes	Strong Financial Stewardship	Good Governance	Service Delivery	Internal Processes
Strategic Results	Improved Councils fiscal Sustainability	Full participation of local communities in Council affairs	Service Innovation	Superior Operational Excellency
	Strategic Objectives and Strategy Map
